

ABSTRACT

[19] An apparatus for mounting an aerosol spray can such that the can may be activated to dispense product from the can at a remote location to the user. The apparatus has a handle, a can base support, a body member and a trigger lever. The lever is pivotably attached to the body member such that it moves a trigger hammer to engage and depress the can push-button to discharge the contents of the pressurized can. The lever has first and second arms disposed at an angle in the range of 91° to 101°.
